

8-10-83

Deenet was put in over a year ago to support ^{and test} X.25 for Deenet and to provide better remote data communication (better than dial up and FTS). Was originally installed on SDVAX - then moved to A when SDVAX moved to Secure partition. Dale Sparks was Group Leader when it was installed. Dennis believes that this was considered to be another dial up connection and there was no need to notify OS.
