The Director
Los Alamos Scientific Laboratories
Los Alamos, New Mexico

Dear Sir:

It might have come as a shock to you that some kids in Milwaukee tapped your computers; but not to me. For over a decade I have known these antics were going on; but I could convince nobody that I should be allowed to put an end to the practice before more damage was done. Those kids were amateurs. The Russians are professionals and they are related genetically to the brains in your laboratories. They are very clever. So am I; but I am on your side. What say you give me a chance to stop this electronic eavesdropping?

I can also explode backwards--on your computer, of course--nuclear devices and so made this offer to Johnny Foster a quarter of a century ago while I was fresh from the staff to develop the LARC.

I can also steal Russian satellites and missiles in flight.

I can also utilize the unforgiving lost milliseconds in your many computers to solve academic problems of mathematics and science which otherwise would remain unsolved for centuries to come. Except for my services, which would be quite small, this would cost you nothing and give you much support and praise from the academic community some of whom dislike you at the present.

I can also speed up your computer programs by as much as a factor of ten. This in no way denigrates your programmers.

I can also set up programs to upgrade your ambitious non-PhD loyal workers.

You could utilize my services as a job shopper or outside consultant.

Yours truly,

Valentine Christian
