APPENDIX I

Mail Message from Los Alamos

From: DEMO   9-MAY-1983 19:10 *
To: DEMO
Subj: john nolnacki

john when are you going to start work??? i will probably start the 16th.

APPENDIX II

Systems Accessed

The following systems are among those that/
were   accessed:
* Los Alamos National Laboratory
* Sloan-Kettering Cancer Research Institute
* Information Architects
* Gaffney-Kline
* La Forge Cement
* Security Pacific National Bank
* Western Gear
* Milwaukee School of Engineering

In addition, Neil Patrick claimed to have been on approximately twenty
VAXs in the Milwaukee area. He gave no further information.

APPENDIX III

VMS Exhibits

The following exhibits indicate the kinds of information that can be obtained from a typical VMS system by a user with no privilege.

1. The result of typing HELP.

2. Users currently signed on to the system.

3. A short list of all processes running in the system.

4. Detailed information about the processes running in the system. The block beginning with the date/time stamp and running to the end of the page describes one process. A similar block would be produced for every other process currently known to the system.

5. SHOW PROTECTION lists the default protection given to a newly created file. The owner of a file can, on a case-by-case basis, change the protection for any of his files. There are four classes of user or process that can be controlled, the system, the file owner, other users in the owners "group", and everybody else. The notation SYSTEM=RWED means that the system has Read, Write, Execute, and Delete access the the file.

6. The equipment configuration of the system

7. Names of other systems available through DECnet.

APPENDIX IV

Messages from a Phreak Bulletin Board

Msg. :61 about :TELENET NUMBERS From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 Here are a few TELENET numbers to try for some fun and games: You will have to figure out password codes in most cases yourself. Just dial your local TELENET switch, then try one of the following: C 21200 American Express Company -(type command "Information") C 30155 Newsnet 75 C 201220 "D PVM" I don't know what this means. C 31240 SLVAX 1 Dipto C 31233 Credit Information Corporation Time Sharing C 31250 American Hospital Supply Corp. Waukegan, IL C 31243/44 TRAVENOL Systems A/B C 21220 IRVI I don't know what this means. C 617130 (here's a goody for you!!) C 31340 Alternate Network # Acct # 1300-7777 Password "AID" to read the help files. This is an international system alot like TELENET serving England, Australia, etc and the code shown here is the interchange between them and TELENET. Of course, the above account number and password is a "demo" for new clients of their system. In addition this people have local access numbers in most communities; see the section on "local access" in the above. C 41527 Stanford University MYLBUR system. Answer with "HX.GST" to account number, and NO password is needed. In future messages, I shall discuss more TELENET numbers if anyone is interested, plus similar items from DATANET, the Canadian "cousin" to TELENET.

Msg. :62 About :LOCAL TELENET NUMBERS From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 In reference to message 61, here are a few local dial up TELENET lines for those who may not know them: In White Plains area (914) 328-9199 Manhattan (212) 736-0099 / 947-9600 / 785 - 2540 Buffalo (716) 847-0600 Rochester (716) 454-3430 / 454-1020 Boston (617) 338-1400 Detroit (313) 964-5538 / 964-2989 Chicago (312) 938-0500 Wash DC (202) 347-1400 / (703) 435-3333 Of course, there are literally THOUSANDS of them, far too many to list all, but the above should serve most users of this BBS. For Next ==> All searchers for TELENET numbers should be alert to the TELENET numbering scheme, which is this: The letter C as in "connect" is always the first thing to type. Then! the next three digits always indicate the TELEPHONE AREA CODE being searched. Example: You want to find things in Chicago? You will always type C 312xx. The final two (sometimes 3 !!) digits is the system being called. So for ease in searching, you can begin for example with C 21201 and work your way up to C 21299. You will get one of the following replies in about 99 percent of the cases: ==> 212xx connected (or) 212xx not responding (or) 212xx illegal address. Sometimes you will also receive the reply-212xx Does not accept collect calls. Please establish a paid caller account. In most cases, the computer systems on TELENET take "collect" calls from whoever calls them, but a few require you to establish a specific log on with TELENET first, (in order to place a "paid call") to a given computer. I hope this discussion is useful to people who enjoy finding new systems to experiment with, as I do.

Msg. :63 About :DOW JONES FINANCIAL NEWS From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 Hello guys -- Here is a DOW JONES NEWS SERVICE number you can play with: First, call your local TELENET switch! Then, after passing your terminal identifier (or c/r is OK), ask for DOW-1 or DOW-2 followed by two semi colons (;;) which you probably will <(not)> get echoed back to you! Then, your confidential account number is-- J6L084RON (thats ZERO 84) You may also need to input DJNS (as in Dow Jones News Service) when requested. Type double slashes for the following: //MENU //NEWS //DJNEWS To get stock market news from the //DJNEWS category, enter the appropate abbreviation for the stock desired. Example .T is for ATT. This service operates from 6 AM to 4AM Eastern Standard Time. You can read the WALL STREET JOURNAL on line every day !! Enjoy!!

Msg. :64 About :INTERESTING PHONE NUMBERS From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 Here are some interesting phone numbers for you to try out-- Chicago (312) 996-5100 Univ of Illinois (Circle) Computer Room Chicago (312) 222-6000 Quaker Oats Company Chicago (312) 972-6979 Argonne National Labs ** (you come in on a BBS "front". Log in as follows to break the BBS and access the 370 --> F)Charley -L) Hornaday Department "AI" then on BBS you can break out if you. check the menu and use your instinct. Colorado (303) 349-6496 A good phreak board in the Rockies!! Manhattan (212) 369-5114 Acct # 210,100 Password "Dalton" it will ask you to attach to an open job. Use numbers shown.

Msg. :65 About :NO MORE FUCKING AROUND! (1) From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 As the title suggests, I wish to discuss a MAJOR change in the operation of the OCC's (Sprint, MCI, Allnet, etc) during the next year. These changes are neccessitate by the recent rulings on ATT. Please note that heretofore, Bell has never given any of the Other Common Carriers (OCC's) what has been termed an "equal opportunity" to use the local loop that is) the line from your home to your central office. In the past, when you have dialed a ten digit number, your call has DEFAULTED to 'TT automatically! it was only when you specifically dialed the seven digit access number of the OCC that you were able to use these services. Judge Green has ruled that the OCC's must be given equal treatment with ATT in regards the required number of digits to be dialed in order to place a long distance call. This essentially left your local telco and ATT with two ways to go --> either require that the ATT switchers be accessed by seven digit numbers just as MCI/Sprint are thus accessed, <<OR>> allow MCI/Sprint to have local loop access on an equal basis with ATT. The Bell Operating Companies, and ATT have chosen the latter -- and beginning in January, 1984 when the breakup is complete, long distance telephone calls will be dialed <<not>> with the current ten digits (or eleven digits if you have to dial a "1" in your office) but with twelve or thirteen digits! The first two or three digits will indicate the carrier of choice ==> ATT/MCI/Sprint/etc. Then you will dial the ten digit number as in the past. Your central office will pass your call to the appropriate switcher based on your choice of first two digits (no more automatic default to ATT) AND act as billing/collection agent for them! What does this mean to the average phreaker? Read on.......

Msg. :66 About :NO MORE FUCKING AROUND! - 2 From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 ?(continued from 65). Its like this....heretofore, the OCC's had no way to direct connect with the local loop, and therefore no way to <<POSITIVELY IDENTIFY>> who was using their system. Now it is true that in the older crossbar #5 offices, etc, stepping offices, etc, neither did Bell!! But the times, they are rapidly changing! Bell is going 8SS <<very rapidly>> and especially in cities like Chicago, there is only a small minority of the system not yet converted. As all good phreaters know, under ESS one simply <<does not>> place 2600 on the line, for example, not unless they want a telco security representative AND a policeman at their door within an hour!! The new generics of ESS (the #5) now in production, with an operating prototype in Geneva, Ill, allow the system to silently detect any and all "foreign" tones not available on the customers telset. You got twelve buttons on your touch tone phone, the ESS knows what they are, and you had <<best not>> sound other tones on the line, since the new #5 is programmed to silently notify a human being in the central office, while continuing with your call as though nothing were wrong!! Now you can see where this will lead. Someone will just punch a couple keys on their cathode ray tube, and the whole sordid story will be right in front of them, and printed out for action by the security representative as needed. Funny, no!!! This is the same reason that call tracing has become very sophisticated, and IMMEDIATE. No more having to run in the frames and look, and look, and look, etc. Now, if there is a need to trace a call, the ESS computer does it immediatly and prints it out on a CRT at the modern day equivilent of the tester's board! If your office has not yet gone ESS, you are lucky, and possibly have one or two years at most before your days of FUCKING AROUND are over. (continued next message)

Msg. :67 About :NO MORE FUCKING AROUND - 4 From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 1 What do these new innovations from Bell designed to cause grief for phreakers have to do with the OCC's? ==> As you (must know?), Sprint has eaten one hell of alot of FRAUD in the past few years and so has MCI. Both now claim they have gotten a real bellyfull of it, and as part of the anti-trust agreement entered with Bell insisted on some SECURE method of call supervison and billing. ATT has always had the technology of the local central office to ssist in billing, they said, and We Want It Too!! One good thing about ESS, especially number 5, from ATT's viewpoint, is hts ability for API (Automatic Pair Identification). In alot of the older offices right now, sure, you can bill your call to any old credit card or third number you want, and short of a fairly involved investigations proceedure, you won't ever get billed for it....but under ESS, all ttat changes!! In ESS offices,your <<actual>> phone number is automatically recorded by the computer as a "memo" billing; held in suspense pending "actual" billing/collection of the charges on your call as you have directed the TSPS operator to do. ((TSPS means Traffic Service Position System and its the ESS version of the operator at a switchboard - but under ESS/TSPS the operator can be 100 miles away!!)) So tell the operator whatever you like! Bill "your" credit card! bill President Raygun, bill anything!! Your actual phone number WILL BE on file in the event the billing falls out of the system and has to go into Adjustments for investigation. Lotta guys quit using Bell when the OCC's came around because Bell's ESS was getting hard to beat. Now begining next year, when the OCC's become part of the traditional "telephone family" they'll be getting the full benefits available to all who pass through your local central office. In addition, your local phone company will PROBABLY do the billing for MCI, etc. (continued)

Msg. :68 About :NO MORE FUCKING AROUND - 3 From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 1 (continued from 67..and the header on 67 was misnumbered "4") So the guys served by the ESS offices found it alot easier to simply "make do" with MCI/Sprint, etc, especially since once you latched on to a few codes, you had it made, provided you mostly confined your calls to large companies, switchboards, etc where MCI couldn't easily investigate them.,...As many phreakers know, since none of the OCC's have call supervision facilities in the traditional sense, none are able to detirmine when the called number actually answers, so none of them bill you for the first 45 seconds or so, assuming that in that period of time if you don't get an answer you will hang up....its all changing, guys! All "recognized" (FCC accredited) common carriers get good old fashioned call supervison from Ma Bell starting in January!! Plus Automatic Line Identification, and all the other oppresive features of the all! new! number 5! ESS. I realize that in some smaller towns, and more backward telephone companies you wont have ESS for a couple of years, but you WILL get it!! You see, one of the main reasons for the HUGE PUSH to get ESS installed has been the excessive FRAUD Bell has suffered. As an example, in '1974, prior to any ESS in Manhattan, New York Telephone Co. wrote off <<seven million>> in fraud calling in one year alone, and Illinois Bell Telephone in Chicago was almost that bad!! By comparison, ESS is cheap, takes less floor space, alot less maintainence, and processes many times more calls per hour. Call tracing is a snap; a <<FULL PRINT OUT>> of ALL your calls, even the local ones is available, and there is infinite digit absorbtion, meaning, you dial seven digits and get on a call extender, lets say, then continue dialing digits. The ESS will just keep listing all the subsequent dialing you do, since EVERY LINE will be under full supervision. Have fun, guys!!!

Msg. :69 About :800 CALLING/BAD NEWS! From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 ALL Bell offices - even the older crossbar offices - have been arranged to accept a modified form of ESS at this time, allowing some additional supervision on "800" calls that was not before available....... Somewhere in the hallowed halls of 195 Broadway, a Traffic Engineer did an exhaustive study of all 800 calls over the past few years, and reached the

following conclusio   1) LEGITIMATE calls to 800 numbers last an "average" of 3 minutes or less. Of the IL   (i.e. phreakers) calls made via 800 lines, more than 80 percent laste 5 minutes or longe   ?) The "average"
residential telephon ubscriber makes five such calls to an 800 number per month. (Airlines, Hertz rent cars,   els, etc). In those instances where phreaks were under suspicion, and pen register devices   place on their
lines without their knowledge, the number of 800 calls per month was greatly in excess of five. So it occurred to ATT that in the process of programming certain features into ESS, one such nice feature would be a daily log called
the "800 Exceptional Calling Report". Most central offices have implemented this, or are doing so in the next few months. Subscribers who are "exceptional" in their use of 800 service, as defined by each telephone companies
standards, will find that their line comes under somewhat closer scrutiny, perhaps with a pen register type of attachment. Naturally, nothing will be said until there hs PROOF of what you are doing. Least you claim the telco does
not have the right to spy on you in this way, their answer is that quite obviously they have the right to make a record of what telephone is connected to what other telephone anytime!!! CONCLUSION ==> All phreakers should be aware
that abuse of the network via 800 is becoming an issue with Bell. Watch out !!

Msg. :70 About :LOCAL "800" SERVICE From :ROGER OLSON To :ALL CALLS Date :2/13/83 00:00 In the past, 800 service has been divided into two categories: Interstate, and intrastate. The former consi):ed of "bands" one
through six, covering small to large areas out of state. In addition, "band eight" was your INTRAstate WATS service. There was no strictly local (within a town) 800 service, except for the occassional "Enterprise" or "Zenith" type
of manual connect through an operator. Thats changed too!!! Certain communities now have one special prefix used for the purpose of "local automatic collect" calling. For example, in Chicago, the prefix for this is 950. You CANNOT
reach this from outside the 312 area code. Try it! Call from YOUR area code to 950-1033 (the switch number in Chicago for Allnet). You will not get in. Now, try the same thing from within the 312 area, if you have a way to get on
an outgoing line from within Chicago. You will see you <<DO>> get through to 950-1033!!! One reason for the establishment of these "local city WATS lines" was to placate the OCC's who were bitching because their customers had to
pay "unit charges" or "toll charges" from metropolitan suburban areas to reach the OCC long distance service. That extra ten or fifteen cent charge on the LOCAL phone bill was removing the savings being made by the ten or fifteen
cents off the caller was getting from MCI, etc. In Chicago, most of the much of carriers have been placed on the 950 prefix, although most of them keep their old numbers as well. CONCLUSION ==> Phreakers who use these special
local prefixes to call the OCC's for free should understand that the Exception Report previously discussed is also applicable here! Best thing to do, is my opinion, is NO MORE FUCKING AROUND !! Or at the very least, CAREFULLY
REVIEW ALL YOUR PROCEEDURES FOR PHREAKING AS YOUR OFFICE GETS CUT OVER TO E.S.S.

Msg. :10 About :HELP PREZ RAY-GUN From :ROGER OLSON To :ALL CALLS Date :2/19/83 00:00 All good patriotic phreaks ==> Help your government and help our President Bongo Ray Gun in his decision asking. Here are some
computers in our nation's capital for your consideration. All are TELNET connectable, of course! First, Dial your Telnet switch— then, C 20201 or 20202, or 20210 PRIMENET SYSTEM C 20220 or 20299 Information locator C 20230 or
20232. 20203 Time sharing various departments C 20249 Salvage Test System C 20264 TSO system C 20265, or 20266 cant identify which agency this is... Finally, I believe <<but am not certain>> that C 20226 is the White House!!
When this one answers, all that happens is the Telnet says "202 26 connected". The system just sits there, no prompt for ID or anything else. I could get almost nothing from it. Well, guys, if anyone gets any codes on these,
please leave them here.....

Msg. :124 About :ETC-UNAVARE DE: From :ROGER OLSON To :ALL CALLS Date :2/20/83 00:00 To Mr. Hoffa's inquiry regards the DOW JONES number—you are correct it is TYMNET and <<not>> TELENET. You are also correct that
the phraseology should be "DOW1)1" and <not> DOW-1. In fact you will usually not see one or both of the semi-colons you must type following DOW1—. Regards the log on code, I shall repeat it in the event you had some transmission
error when you read it before, or perchance I mistyped it am) J6L0046BRON It <<was>> an active password as of Friday 2/18. I do not see why it is not today, since I guarantee it has never been used let alone
To Mr. Phreak!! You are quite correct in your assessment of how "dead" nodes operate. We call it sending "Here Is" in
response to the ACK. I think you are assuming because the node behaved differently than the others posted, that <<I assumed>> it was a direct line to Bongo. I DID NOT, AND DO NOT make that claim!! Why would Bongo need a Telenet
connection since people are there to help him? Well, why does he need a telephone on his desk? There are people there to answer the phone also, is that correct? I doubt Bongo bothers with any of it! Its those <<very people>> you
mentioned who run these facilities I suppose. And it occurs to me that it would be a <<very inefficient>> system to hard wire Bongo in any case with each and every agency, federal building, etc in the nation when most <<(for
security oriented)>> data could quite easily be transmitted over the public network. Is the phone on Bongo's desk also hard wired in this way, to the exclusion of at least one key on his telnet marked "dial ? for whatsis line"? I
think you are mixing apples with oranges, further I never CLAIMED anything!!

Msg. :125 About :METROFONE SERVICE From :ROGER OLSON To :ALL CALLS Date :2/20/83 00:00 Here is one for you to try FROM CHICAGO: (312) 853-4700 THEN IV1313 A M TO 7 AM WEEKDAYS AND ALL HOURS WEEKENDS. This is
METROFONE, a division of the Western Union Telegraph Company. If you have their switch in your town, try the above code. No guarantees it works anywhere but from Chicago. They are basically brokering service from MCI, as is Allnet
and US Telephone. On the subject of US TEL. do you have that one on the East Coast yet? Here in Chicago, they are using MCI lines and/or Bell WATS lines, giving universal service to all cities in the USA.
——————————————————— (312) 645-7770 (data) is a tie in to Trans Union Credit Information Corporation for credit bureau reports nationally based out of Chicago. The log on consists of two
parts(==) First, the Account, which will be a letter followed by three numbers (i.e. B 123) then the "sure check" number. It looks like this when you type it out(==> (control c)**L(sp)MNN,sc,p++ Give control c, enter two
asterisks,the letter, 4 space, the three (or four)) digit number, a comma, the two digit "sure check" number, a comma, a letter p (as in "paper" as opposed to "gram") and two more asterisks. The p/G thing is if you were using
printed form paper from the credit bureau the computer would know to send certain tabs, spaces, etc. On plain paper it sends it out different.

AND 4 DIGITS. I HEARD A CLICK BUT NOTHING AT ALL HAPPENED. COULD SOMEONE PLEASE TELL ME HOW TO USE IT? ALSO, DOES ANYONE HAVE THE CURRENT CN/A # FOR 417? I HAVE A NUM BER FOR THIS AREA CODE, BUT IT WAS DISCONNECTED A WHILE AGO.
WHEN CALLING CN/A'S, HOW ARE YOU SUPPOSED TO GET A PERSON'S ADDRESS? ALL THEY GIVE ME IS THE PERSON'S NAME. ANY HELP WILL BE APPRECIATED.   THANK YOU!   MICKEY

Msg. :213 About :TELENUT INFO From :SYSTEM CRUNCHER To :TELENUTS Date :3/1/83 00:00 Howdey folks! This is the world re-known Iso-System-Cruncher. What? You've never heard of me? <snicker> Well, anyway, I've been
holding back on some TeleNut stuff; I like playing around with the standard university type, yes, they are DEC-10 Systems running a TOPS-10 Monitor (I think). One nice thing about these systems is that a user can FLOAT in a
limited command mode (a program called OPSER) which will allow you to UST and get some SYSTEM infor- mation on configuration. On-Line help is also available. The UST command on these systems is usally SYSTAT, and a SYSTAT U will
display the user names along with the ppn. Since all passwords are 6 letters long, most dumb, I mean REAL dumb, people hide their password in thier user name. At any rate, here are some standard university systems, 617167,
617170, 51252, 71431, 617179, 617177, 20464, 204180, 202139, 202144, 201147. And here are a few passwords, ppns for a few ports, Port PPN   Password —— ———— —— 617170 10,165   VIKING 202139 3250,7001 DIST01
3250,7002 DIGT02 ''   3250,7003 DIST03   etc for this one. Note: 202139 has a syster system, 202144, passwords are the same; also, 201147 doesn't ask for a password!

Msg. :214 About :TELENUT INFO (CONT(From :SYSTEM CRUNCHER To :TELENUTS Date :3/1/83 00:00 Oh, I forgot to mention; When you connect to 202139 (or 202144) and use the ppn of 3250,700x, where X is 1-12 (ie- 3250,7001)
and the coresponding password, DIST##, where ## is "0+X" (ie- DIST01 for 3250,7001, and DIST10 for 3250,7010) you are placed in an AUTO-IRUN type of program, it's a stupid statisitcal program. You will find that ^C doesn't escape
the program, well, the way to by-pass that is to log on under that account, then hangup on TeleNut. Re-Dial TeleNut and Re-Connect to that system. Re-Log onto that same account, type in the password, and the computer will prompt
you with: Other job detached with same ppn, Enter job number to attach or press <return> to start a new job At that point, you want to ATTACH to the job you just detached. If it was 21, then enter 21 when the computer
asked as above. ATTACHing a job will by-pass the auto-irun program that was setup, and the system is all yours. I had many more passwords for university systems, but my will to destroy lead them to be changed (sorry), these
passwords are valid, so please don't change them (notice I didn't tell you how to change them). PS: These systems are very similar to CIS, if you find a way to crash one of them, chances are, it will have the same effect on
CIS's systems <snicker>! Iso-joe

Msg. :225   About :TELENET DIRECTORY From :ROGER OLSON To :SIDNEY SCHRIEBER Date :3/2/83   00:00   For a complete list of phone numbers to access Telenet, call the local Telenet switch, then to the ' prompt, type "MAIL". It
will ask for User Name: "PHONES" It will ask for Password : "PHONES" (A second time) You then get to choose breakdown by area code, state, etc. For a directory of systems using Telenet: Call TIMECOR (617) 720-3600 or
(617) 783-5051 Dont bother to apply for a log on to this BBS unless you want one....just go to the "General Features" and read the item #2 I think, entitled Directory of Telenet Computers. You will get a list of a couple hundred
systems by area code around the USA.

Msg. :248   About :SUM COMPUTOR NUMBERS From :SYSTEM CRUNCHER To :DAIL UP NUTS Date :3/7/83   00:00   Okay folks! Here are some, area code 301, computer dial ups: 666-5968 & 666-5969 ENC Controls in Hunt Valley,
they are running RSI 2.M+   296-2501   Greapler Realty, they are   thru 296-2509   running RSTS/E. Remember, th Error, Remeber, that is area code 301.   PS: I LOVE RSI systems, and have found two on
telenet so-far, they are 20465 & 416115. If anyone can help me break some accounts, I'd greatly appreciate it. You can Identify an RSI system simply because it prompts you with MCR) or DCL), and sometimes just a ">". Use "HELLO" to
logon, usernames and passwords are only 9 digits long. I have 2 codes for the above system, but they are privileged(sic) and I'll give them out in return for something. Can you blame me? It took 3 weeks of CRACKING to get on.
System Cruncher *:!(8(!!(!!<<)>((CRACK! !)*(!(!!!(*!*((((6*&&<< Who broke my computer. By the way DSUNY SysOps, I confess.

Msg. :269   About :LOOP LINES From :BRUCE GOLDMAN To :ALL Date :3/10/83   00:00   In N.Y. City and probably eleIse where loop lines have the following suffixes 9977 and 9979. If you care to find an active number, call any
exchange with 9977 after it (is 664-9977) if you get a signal you probably found an active loop line. The person you wish to contact should then dial the same exchange (664) and 9979. All suffixes that start "99" are telephone
company #s, I've used loops for 8 years with no problems, the phone company doesn't seem to mind, as they never seemed to change the procedure. VOTE LIBERTARIAN! Bruce

Msg. :301   About :CHICAGO NUMBERS From :ROGER OLSON To :THE PYRO Date :3/15/83   00:00   One interesting ANI here is on "area code" 200. No such thing, obviously, but you dial 200-ppp-nnnn. Anything after the 200 you wish.
In some ESS offices, a computer voice will come back to you and read the number you are actually on. Or dial 200-555-1212 and you will get the test board. <<Do not>> use a "1" in front of this special area code. From outside 312
I do not think you can reach this. In non ESS offices, after dialing the above you just get a continuous, steady ring, but eventually someone will come on the line and say something like "Franklin frames", or "Edgewater Test
Board". Then, if you <<sound like>> you are one of their kind — the man will tell you the number you are on. Suggested response when he comes on line, "Yeah, this is Brown from Lakeview..." etc. <<Be cool about this!>) Either
talk like a phone man or <<dont>> talk at all! If by chance you are rather sure you know what the number is that you are on, and you wish to confirm, dial 200 plus that number and if you are correct, instead of getting the man you
will get a "tic tone" (tic tic tic tic) from some offices and a reorder (fast busy) from other offices. Other three digit codes of interest in Chicago "230" "240" "250" 270" but take <<extreme care>> especially with 230. This
comes up right on the testers board, he can drop the hammer on you; put up a shoe on the line, lock your line up, withold dial tone, ring you back and generally mess with you! I think "330" is also one of these. ******Ring back
codes: In older offices, it is 571, You will hear another dial tone, dial "6" and hang up. Phone should ring back repeatedly until you answer. In ESS offices, it is either 571 - 572 or 573 plus the four digits of the line you are
on. i.e. 571-1234 get dial tone, dial 6, hang up, etc.

Msg. :302   About :OTHER CHICAGO ODDITIES From :ROGER OLSON To :THE PYRO Date :3/15/83   00:00   Test lines! Prefix plus "1" plus prefix. Example: 928-1928. Another example: 287-1287. Not in every case, usually just in
older offices. Returns tic tone and high pitched tones. 744-1744 a third example..... 9900 series! All numbers 9900 through 9999 on a prefix are telco lines. Many are not in service. Some are, 9954 is usually in the frames
somewhere. 9969 is a supervisor. <<Used to be>> that 9928 was a <<beautiful>> extender, and went out on 9929 but a local phreak went crazy on them and all have been shut down (details in a message if desired, its an interesting
story - phreak went to jail, lots of us very embarrassed). In some cases — 9973 is a loop around with 9974 but these now have tones on the line and its impossible to talk over them, also courtesy of the phreak who brought the
wrath of the IBT security department down on all of us. 9997-9998 are usually silent termination lines. A couple of others always return busy signals (9991 I think?). ******Here is the CNA number in Chicago for <<published>>
phones! (312) 796-9600. Pass her the number, she will give you name and address, or will come back to reply that it is non published, and/or no record. Open 24 hours. They answer sometimes saying "what number?" other times saying
"special operator, name and address". They handle all 312 phones including 800 lines within 312, but they do not have the listings for Central Telephone Company which has two prefixes in Chicago and a couple prefixes in Park
Ridge/Des Plaines IL ....(other oddity) Did you know Chicago is the <<only city>> in the United States to have <<two actual phone companies>> within the same town? Illinois Bell has everything but for a tiny area on the northwest
side that belong to Central.

Msg. :303   About :MORE CHICAGO ODDITIES From :ROGER OLSON To :THE PYRO Date :3/15/83   00:00   We have a "localized" 800 service here. It is the prefix "950". You cannot reach a 950-xxxx number from outside the 312 area.
Within 312 it is toll free, you even get your twenty cents back in a pay phone. Right now, only has a few things on it...all the OCC's (MCI/Sprint/Allnet) are on it. ******* Here is how to defeat "911" auto line ID to the police
dept. Usually calling 911 your number, street address, etc is printed on the police dispatchers CRT, but to avoid this, dial 787-0000. (That is correct! four zeros after "787"). That is the number the operator would dial, should
you dial here in an emergency. For some reason, TRPS cannot handle 911. The operator is <<supposed>> to stay on the line after dialing 787-0000 and pass your number by voice to the police dispatcher since he <<does not>> get
your print out via that circuit, but most operators wont bother. So anonymous tips to police, etc, you can use 787-0000 to avoid any hassle to yourself. ******** Pay phones: All pay phones in Chicago begin with "90" through "98"
as the first two of the final four digits. Some exceptions are in the 939 and 422 prefixes downtown where payphones also begin with an "8", and in the Longbeach 561 prefix where "9" <<is not>> a payphone. ***** Mass calling
prefix is "591". "Mass calling" means <<huge>>rush periods to radio station call in contests, etc. All 591 numbers translate into another prefix but the same last four digits. For example, WKKK-FM used to announce 591-9500 for T
shirt giveaways to the 20th caller, etc. You could get them faster and <<more accurately>> by detouring around the crowd and dialing Superior 7-9500. Etc. "591" was just a route code, not an actual prefix. Now under ESS they have
screwed that up also in the downtown area!!

Msg. :345   About :THAT DOW JONES NUMBER From :ROGER OLSON To :ALL CALLS Date :3/15/83   00:00   A while back, I posted a DOW JONES number here. A certain one of you complained that it was wrong. I checked and could find

Msg. :345   About :THAT DOW JONES NUMBER From :ROGER OLSON To :ALL CALLS Date :3/15/83   00:00   A while back, I posted a DOW JONES number here. A certain one of you complained that it was wrong. I checked and could find
nothing wrong. Still the complainer made an issue out of it, so I figured phuck it. Now — just today I saw the billing for the number for last month. <<$500 worth of phreak calls!!>> so I guess it was not wrong after all! Good
work, guys, and keep milking this one until it gets cut off. Here it is again if you missed it before — for the Dow Jones stock report and the daily Wall Street Journal on line — Call your Tymnet switch — then Terminal
Identifier "A" Ask for DOW-1!! It maybe DOW1!! without the space but be sure to include the two semi colons, which you may not get echoed back to you. The password (is correct!) J6LO84ROW The first /0/ may possibly be a /0/
zero, I forget, the latter is definitly an /0/. Commands are: //Menu //News   //DJNews be sure to use the two slashes // before the words. Also after you first log on, you gotta ask for DJNS. Try this Tymnet / A / DOW1;; /
J6LO84ROW / DJNS etc. or else reverse the DJNS part. Anyway — keep this one going, they will cut if off in a couple weeks or so, then I will have another one for you!!

[large degraded paragraph, partially legible]

THE DIFFERENCE BETWEEN SPRINT, METROPHONE, ETC.   ...ALL OF THESE SYSTEMS HAVE THEIR OWN NETWORKS... THAT IS, THEIR OWN LAND-LINES, LINES LEASED FROM THE BELL SYSTEM, MICROWAVE RELAYS, ... OF THESE SYSTEMS HAVE LOCAL CITY ACCESS NUMBERS, ALTHOUGH SOME LIKE ALLNET AND MCI HAVE SPECIAL WAYS OF USING A TRAVEL SERVICE BY DIALING A SPECIAL NUMBER, WHILE SPRINT USES A TRAVELCODE TO USE NODES OUTSIDE YOUR LOCAL CITY. ... ON METROPHONE YOU CAN DIAL YOUR AUTHORIZATION CODE AS-IS ON ANY ONE OF THEIR ACCESS NUMBERS.   A LONG-DISTANCE TELEPHONE COMPANY CONSISTS OF FOUR MAJOR PARTS. YOU HAVE YOUR INPUT,.. THAT IS, A LOCAL ACCESS NUMBER OR A TOLL-FREE 800# NUMBER TO ACCESS THE SYSTEM. WHEN YOU ACCESS THE SYSTEM, A DEVICE CALLED A "SWITCH" ANSWERS, GIVING YOU THE FAMILIAR "COMPUTER DIAL TONE," WHEN YOU ENTER YOUR AUTHORIZATION CODE AND DESTINATION NUMBER, YOU ARE ROUTED OVER THEIR NETWORK, WHETHER IT BE SATELLITES, MICROWAVE, LAND-LINES, OR EVEN OUTWARD WATS LINES LEASED FROM THE BELL SYSTEM. THE HEART OF THE SYSTEM IS THE CONTROLLING SYSTEM, WHICH INCLUDES THE "SWITCH." IT IS THE COMPUTER THAT CHECKS THE AUTHORIZATION CODE, HAS PROVISIONS FOR TIME-OF-DAY RESTRICTIONS, TRAVELCODES, ACCOUNTING CODES, AND THE LIKE. THEY HAVE MANY PROVISIONS WHICH THE LONG-DISTANCE SERVICES DON'T USE, SUCH AS THE FAMILIAR "SPEED NUMBER". WHICH HAS LED TO THE (ALSO FAMILIAR) "ONE-ONE-ONE-POUND" BUG. THE SYSTEM CHECKS TO SEE IF THE LOCATION IS ON THE NETWORK, AND ACTS ACCORDINGLY. IT SAVES A LOG OF NUMBERS CALLED, THE AUTHORIZATION CODE, AND TIME USAGE TO A WORD-PROCESSING TAPE, WHICH IS READ BY ANOTHER SYSTEM FOR BILLING. SOME COMPANIES CHARGE IN ONE-MINUTE INCREMENTS, ALTHOUGH THE SYSTEM HAS THE CAPABILITY TO RECORD TIME USAGE IN 6-SECOND INCREMENTS. THE SYSTEM IS MADE BY NORTHERN TELECOMMUNICATIONS, AND IS BASED IN DALLAS, TEXAS. ANOTHER SYSTEM WHICH SELLS SIMILAR EQUIPMENT IS ROCKWELL WESCOM. MCI TELECOMMUNICATIONS WILL BE PURCHASING NEW SWITCHES FROM THEM, AND THEY WILL BE INSTALLED BY DYNACOMP TELECOMMUNICATIONS, ALSO BASED IN THE DALLAS AREA.   I ASKED NORTHERN HOW MUCH IT'D COST ME IF I STARTED A SERVICE USING 2 INWARD AND 2 OUTWARD WATS LINES. THE COST OF THE SYSTEM WOULD BE A MEAGER $250,000.00 TO START UP, AND ABOUT $200.00 TO 300.00 PER LINE (2 LINES). HE ADDED THAT THAT'S REALLY NOT A GOOD IDEA OF A PRICE, BECAUSE FOR THAT SMALL OF A SYSTEM IT'S NOT COST-EFFECTIVE... THEY ARE GEARED FOR LARGER NETWORKS. ALLNET ----- ALLNET IS A SYSTEM WHICH HAS 22 CITIES ON ITS NETWORK, AND IF YOU CALL OFF OF ITS NETWORK, IT USES BELL'S WATS LINES. MOST OF US ARE FAMILIAR WITH THE 1-800 NUMBERS LIKE 321-1424, 621-1447, AND THE NEWLY DISCOVERED 241-6028, THESE ARE ALLNET'S TRAVEL NUMBERS. IF YOU CALL FOR LESS THAN FIVE MINUTES, IT COSTS LESS THAN BELL. IF YOU CALL FOR MORE THAT FIVE MINUTES, IT'S EQUAL TO THE BELL RATES..... SO THE OWNERS OF THOSE CODES SURE MUST BE SURPRISED WHEN THEY GET BILLS IN THE HUNDREDS OF THOUSANDS

BILLING, etc on Bell's lines led to the decision to rapidly install the ANI, for example -- even if the rest of the ESS was several years away in some cases. Some telcos - mostly in larger cities have also begun using one the ((most ugly)) features of ESS -- that of the "user profile") where users who do not fit within certain broad guidelines in their use of special services such as "800 calling" are scrutinized more closely. So you may not have it for two to five years. You WILL get it, and in f many phreaks in small towns are on such ancient switches that when ESS comes to their town it will be a horrible shock! ESS even (sounds different) when you call. The only thing you will recognize is the voice of the person you are talking to. The sounds you have become acquainted with while the call is being connected are all gone. Total silence as you dial and as call is setting up. In fact the number you are calling begins to ring ((instantly)) when you dial the final digit. ROM chips in computers work fast, and that is what ESS is all about!!

Msg. :343   About :FORBIDDEN SOUNDS From :ROGER OLSON To :W.C.FIELDS Date :3/22/83   I thank you for the compliment regards my knowledge of ESS, I do not really know all that much -- mainly from a user standpoint, and it is ((not)) the sort of thing the telco will give you any schematics or documentation for!!! Regarding WHO made the tones in question - you or a TSPS operator - I think the best answer would be that they meant their ((own doing)) from attention. I am told -but I do not know the exact mechanics of this - that any line can be programmed for a variety of things, and I guess such forbidden tones is one such angle. For example, here are a few things that can be done in an ESS office with individual lines that are ((very difficult)) to arrange in crossbar types: (telco refers to these as "classes of treatment" for lines) Line fixed for OUTGOING calls only. Incoming calls to intercept. Line fixed for INCOMING calls only. Battery but no dial tone if receiver is lifted on phone. Line fixed for outgoing LOCAL calls only. Attempts to call the operator rejected, as are calls with zero or one as the first digit. Line fixed for outgoing LONG DISTANCE only. Zero or one must be first digit dialed. Line fixed for COLLECT calling only. Paid calls rejected, as are 3rd number or credit card billings. (Used in prisons, jails, other controlled situations). On these, zero is only acceptable first digit to dial. Line fixed for OUTGOING CALLS REQUIRE I.D. (what used to be a "0" number in manual handling situations). Dial your call and insert 4-6 digit personal code (large companies, etc). ESS does all this and more! (more next message)

Msg. :344   About :ESS STUFF From :ROGER OLSON To :W.C.FIELDS Date :3/22/83   I think there are about FIFTY classes of treatment, with class 1 being totally unrestricted and a "normal" line, as the numbers progress the types of specialties change. About 20 "classes" are available, the remaining 30 or so are merely various combination of the first 20 (i.e. Outgoing calls only; no long distance call allowed, etc). Probably 85 percent of the phone lines are just your average normal arrangement, the other 15 percent are very esoteric arrangements for super large companies; institutions; government, etc. A few other classes of treatment are: DECLINE TO ACCEPT OPERATOR ASSISTED CALLS. Operator is unable to intercept line to test for busy in case of emergency, etc. This one shows up alot on modem lines, since as you probably know, an operator cutting on line during your computer session will frequently disconnect your modem. HOTEL/MOTEL SERVICE - Guest dials call normally, but TSPS will come on line to take room number or credit card number without having to dial zero plus. TSPS sends charges on "paid" calls back to hotel via private line to either a Teletype machine or billing equipment on hotel premises. AUTOMATIC REVERSE CHARGE ACCEPTED - This is your "800" service. Under ESS they just take an ordinary line, regular 7 digit number and assign an 800-(billing code) to it. COIN SERVICE - This is your traditional "pay phone" but is a new arrangement. Instead of a coin hitting a lever which makes the tip go to ground for a half second (ground start line) the ESS is given "dial tone first" and instead of the five cent "ding" and the ten cent "ding ding" and the twenty five cent "dong" as the coins are deposited, the coins being deposited make certain frequencies on the line. ESS is told from a phone in this "class of treatment" to expect these frequencies, etc.

Msg. :345   About :UNAUTHORIZED TOUCH TONES From :ROGER OLSON To :ALL CALLS Date :3/22/83   As every phreak ((must)) know, if your central office is set up for touch tone, then every line is set up for same and to get touch tone service, all you gotta do is liberate a touch tone phone someplace. If the tones do not sound when pressed then you get the tip and ring reversed. Change the position of the red/green (yellow/black) wires and you should be all set, but in ESS offices, you can forget it! In an ESS office, when you lift the receiver to make a call you are extended (one of two types) of line selectors. The one is for customers who have PAID FOR touch tone, the other is for customers who are listed having ROTARY service. Oddly enough, you reverse the tip/ring and you wont get the tones, place them properly you will get the tones -- but -- touch tones ((won't)) "cut" the dial tone in an ESS office unless you paid for it! There is ALWAYS a big fiasco with this everytime an office is cut over. For various reasons, telco outside plant records are and always have been a shambles. They get very poor records about what is on the subscribers premises. Example: Amoco Oil Company here in Chicago has had centrex for about fifteen years on the "856" prefix. About 4 years ago, that prefix went ESS. The cut was made on a Sunday morning so that normal business to the company would not be interrupted. Monday morning everyone comes to work, and half the touch tone phones in the office dont work! Telcos records did not say to set up those lines for touch tone! It was a good four years worth of service orders and record changes never sent to the frames....now days at least Illinois Bell is making a major effort to reconcile records regards cable and pair assignments, customer equipment, etc. Another ESS cutover is made, Austin office is scheduled to cut March 25; parts of Rogers Park go ESS April 30.

Msg. :346   About :NEW ESS POINTS From :ROGER OLSON To :ALL CALLS Date :3/22/83   For dedicated phreaks, ESS poses a number of serious problems. The telco of course tells a different story....aside from the obvious advantage in call completion now available to the telco (which they never will tell you about!) there are many good things available to customers that the telco uses as a selling point in ESS-- how beneficial these are to you, versus the obvious disadvantages, you will have to decide. Telcos are finding that these "enhanced features" are big sellers! They are: "Call Forwarding" -forward incoming calls to whatever phone you want, local or long distance. "Call Waiting" - a tone comes on line to let you know another call is trying to reach you when your line is busy. "Three Way Calling" - use the switchhook to hold one party while bringing a third party on the line. "Consultation Calling" - like three way, but you converse privately with a third person, hang up and get the first one back who had been waiting on hold. "Speed Calling" - allows calls anywhere in the USA or Canada by dialing just one digit and the star sign. "Store and Forward" - cant reach your party? Dictate a voice message to the computer, Tell the computer to try every fifteen minutes till your party answers, then deliver your recorded message to him. "Answering Service" - like a phone answering machine, but it is in the computer! Dial a special code, dictate your "answering service" message, hang up. If you dont answer after a set number of rings, the computer will play your message and take a message from your caller! Telco is getting ((big bucks)) for these enhanced features!

Msg. :421   About :DOW JONES ACCOUNTS From :MAXWELL WILKE To :ALL Date :3/29/83   You can obtain all the Dow Jones accounts you want for only $19.90, and you get a CompuServe account with it! Go to radio Shack and purchase the accounts package--. The one with the accounts but no software. You'll get a regular CIS PPN and you'll get a Dow Jones folder with a serial number. You call the 800 number and say you want your free hour, they'll ask for name, address, phone, kind of computer & software, etc, then ask for serial number. Give it to 'em, You'll get your account... but they DON'T TURN IT OFF AFTER THE HOUR!! And you don't sign & mail in the contract, so they have no legal grounds for collecting, that is if you give real address, but I'd suggest real address because of valuable book they give you which includes all the telenet & Tymnet #'s in U.S. Now here's the phun part... You just keep calling and getting more accounts! They have no way (apparently) of telling if the serial number on the folder has already been used. Don't try to change the #, as I think they are on a formula with check digits, etc.. Just give the same one over & over again. I got 8 Dow Jones accounts from one purchase! Could probably go on forever! But I only have 10 different addresses that I have (safe) access to. If you try it, let me know what happens. Max Wilke

Msg. :475 About :CLEAR THIS UP From :TOM TONE To :ALL Date :4/8/83 First off, let me clear up the buzz-buzz about allnet. I was not going to clear this up but it seems as if nqone has found a code, the format is 10 digits(4 digit travel code). thats right 10 digits. there is on the average one code in ten thousand. as for telenet, Telenet has many local access numbers. the list is huge.if u want the whole list get onto any telenet node and type ' mail user;phones password;phones you will be greeted for all the necessary information. if any of you use the bbs in england leave me a message 011-444-82-859-159 it uses us frequs from midnight to 6:00 am english time. lets see how many of you call really go "the distance". t,t

Msg. :477 About :MCI/NCI/OCC'S From :TOM TONE To :ALL Date :4/8/83 For those of you that use MCI and SPRINT you should realize how they bill. These carriers bill by the month usually at the end of the month. The people would go ahead and find NEW codes, by now I mean codes not posted on bulletin boards,and use them for about a month,there is relatively no possibility of being caught. This is because you are not attracting any attention by making calls since that is why that account is there.When the customer gets his bill and makes a complaint the code is then watched. This is where the danger lies.Codes posted on boards are surely watched. Don't you think that this one had security logging in.So, In concluding use codes that limits people have. t,t

Msg. :480 About :MCI From :MR. AMERICA To :* ALL * Date :4/9/83 OK GUYS HERE IS A NICE PHONE AND CODE NUMBER. IN THE CITY CALL 766-9200 AND THE CODE 27773 GOOD LUCK.

Msg. :484 About :SPRINT From :NAPOLEON BONAPARTE To :ALL Date :4/13/83 THERE ARE TWO TYPES OF CODES THAT SPRINT USES- BUSINESS CODES AND PERSONAL ONES. BUSINESS CODES ARE MUCH BETTER TO USE, SINCE THEY MIGHT BELONG TO SOME LARGE COMPANY LIKE IBM, THAT, DUE TO THE LARGE NO. OF CALLS MADE FROM THIER CORP. CAN'T KEEP TRACK OF CALLS. WHEREAS, WITH SOME PERSONS CODE, CHANCES ARE, THE PHREAK CALLS WILL BE DETECTED IN THE FIRST MONTH AND THE CODE WILL BE WATCHED, SHUT OFF, AND/OR CALLS WILL BE MADE TO THE DESTINATION NO. THERE IS A WAY TO TELL THE DIFFERENCE BTWN. BUSI- NESS & PERSONAL. IF A CODE WORKS IN THE MORNING FROM 8-11, IT IS A BUSINESS CODE. IF NOT, DON'T USE IT. ALSO, BE CAREFUL WHO YOU CALL. DON'T CALL YOUR GRANDMOTHER IN FRESNO.SHE WOULD BE PERFECTLY HAPPY TO TELL SOMEONE ABOUT THE CALL SHE GOT FROM HER GRANDSON IN CHICAGO, 'NUFF SAID. IF THERE ARE ANY APPLE-CAT USERS OUT THERE, I WROTE A PROGRAM THAT HACKS CODES FROM SPRINT. IT DOESN'T REQUIRE YOU TO HAVE A D.C. HAYES MIRROR CHIP. IT ISN'T VERY USER-FRIENDLY, BUT COULD BE USED ON OTHER OCC'S WITH SLIGHT MODIFICATION. HAPPY

Msg. :516 About :TRY THIS ONE FOR CODES From :ROGER OLSON To :ALL Date :4/17/83 A remote part into the Amoco (Standard Oil-Indiana) Central is: (312) 856-1000 1 (<cannot>) find any codes that work it, and there seems to be some sort of weird tie in to MCI (if you dial a long distance 0. You enter 10 digit number to be dialed, then you will hear four tone sparks. You are then to enter the proper code. If it is wrong, you will hear a recorded voice that sounds very much like the MCI lady... Also, the "mystery code" is apparently four digits. If you dial the proper number (instead of 10 digits (0 number) you will get the appropriate extension at Amoco, but the four digit mystery code is still required.

Msg. :519 About :SPRINT/MCI/OTHER BUGGERS From :ROGER OLSON To :ALL Date :4/17/83 I highly recommend the procedure mentioned here earlier for staying OUT OF TROUBLE with "the competition". Look for your own code. Don't use the same code on 800's except maybe once, to "get a feel" of how the particular system works. If possible, test the codes between 8 - 11 AM to determine if they are business codes or not. When possible, use a local line to call into/out of to the switch you are using. This simply adds more congestion in the event anyone is tracing. When possible, STAY AWAY completely from these OCC's, opting instead to use the Wats lines from large companies via their remote call in ports. You always want to stay away from systems that individually account for each call, as MCI/Sprint do. WATS lines, on the other hand, especially in older exchanges, do not record every call... just the total time the line was in used, in hours per month. In either case....Have your phun now!! Cause after the Final Judgement and Settlement is implemented next year, you will place <<all>> long distance calls by merely dialing the number desired, and entering a two digit "choice of carrier" code (for ATT, MCI, Sprint, Allnet, etc) and your local central office will use ANI to supervise your call! The outfits like MCI will discontinue dealing with the public as such, and will only deal (with other telephone companies) who in turn will act like billing/collection agents for MCI, etc. Watch and see! The times are changing! No more phucking around!
